GRAPE VARIETY: 100% Nebbiolo.

PLACE OF ORIGIN

THE VINEYARD

The vines are Guyot grown with the countertrellis system of planting, and medium-short pruning. The vineyard has an average density of 4000 vine-stocks per hectare, and the production is reduced by the cluster thinning method.

VINIFICATION

The grapes are collected when they are fully ripened and laid into small 20kg perforated boxes. If necessary, a strict cluster selection is made. The grapes are taken to the wine cellar and crushed within a few hours from the harvest. The fermentation takes place at the controlled temperature of about 32°C with repeated and delicate pumping over. The marc maceration is long, 300 hours on average. The new wine is then put in wooden barrels, where the subsequent spontaneous malolactic fermentation takes place.

FINING

For 24 months in oak barrels; then, the wine is fined for few months in bottle.
